

the FACTS

1 in 4 people is a carrier for a preventable genetic disease.

80% of babies born with a devastating genetic disease have no family history of that disease.

There is a 25% chance of having an affected child if you and your partner are both carriers for the same disease.

Anyone can be a carrier, but the safest way to find out is to
GET TESTED.

the PROCESS

1 REQUEST A KIT 24/7

Visit JScreen.org to request a kit from anywhere, anytime.

2 COLLECT SALIVA SAMPLE

The health professionals at JScreen review your information. Then, a "spit kit" is mailed to your home.

SEND TO LAB

3 Kits are sent to our certified genetic testing lab where the samples are quickly processed.

GET RESULTS

4 Licensed genetic counselors are available to privately discuss your results using phone or secure video.

the POSSIBILITIES

- When it comes to planning for your family's future, access to comprehensive genetic testing is what you deserve and what we deliver.
- Results are accurate, confidential and actionable.
- Our primary goal is your peace of mind.

GIVE A JGIFT.

A PRESENT FOR THE FUTURE

Give the gift of screening with a JGift card and help your loved ones plan for a healthy family.

Go to JScreen.org/gift to find out more. It's the gift that lasts for generations.

PRAISE

I have already started to recommend JScreen to my friends and family. It was easy, informative, and provided me with a great sense of security as my husband and I start planning our family.

- Ali, OH

[What I like most about] JScreen is simplicity. It was easy to do from home. I'm busy and this enabled me to take care of this important test while not drastically interrupting my day to day life.

- Dan, OK

I loved how I was able to video screen in with the staff when the results were ready so they could be explained fully to me.

- Alexandra, GA

[I] was so happy with everything. [It was] super well organized...fast...and easy. Staff is on top of everything and very responsive.

- Ilana, NY
